5 TIPS FOR CREATING THE BEST WEB BASED STUDENT INFORMATION MANAGEMENT SYSTEM

Student information systems, or an SIS, record and track all areas of student information, including grades, attendance records, and more. On top of that, they assist with essentially every function faculty and administrators need as well. That includes everything from admissions to financial aid, and much more.

A web-based SIS has a multitude of benefits. Many schools are using outdated systems without even realizing it. When it comes to creating the best web based SIS systems, there are a number of things it will need to focus on.

Here is our guide for five tips to make that happen.

#1

Store Information Accurately & Easily

A web based SIS should consolidate all records so they can be quickly and easily accessed by students, staff, and more.

Students need to be able to view transcripts, enroll in classes, view and pay tuition, and build their schedule easier than before.

Essentially, your system should make information readily available, easily accessible, and clear to navigate for everyone involved.

#2

Build Communication

This goes for everyone: parents and teachers, students and faculty, and from department to department.

Does a student have a question they need to ask their professor? An easy-to-use web based portal should make this a breeze.

Oftentimes departments can be isolated from one another. Your web based SIS should break down those barriers.

#3

Improve Security

Simply put, cloud-based systems offer superior security and should always be used.

These provide easier set-up, easier access, and additional support.

Any good SIS needs to have proper security in place to protect important and confidential student information.

The background of the slide is a dark blue overlay. On the right side, there are two photographs. The top photograph shows a group of five people (three men and two women) sitting around a table, looking at documents and smiling. The bottom photograph shows a close-up of hands typing on a laptop keyboard. The text "#4" is in orange, and the title "Offer Ongoing Support" is in white.

#4

Offer Ongoing Support

Beyond simply training, the best web based SIS will offer ongoing support for any needs.

Every good student information system should include ongoing maintenance to keep things running smoothly.

Whether its a minor setback or an emergency, your student information system needs to have a team of professionals that are happy and willing to help.

#5

Make It Easy To Use

Finally, make sure your web based student information management system is easy to use.

That means that everyone, regardless of their technological skills, should be able to navigate it and do what they need to do without having constant bumps in the road.

The modules and templates should be sleek, easy to use, and simple. After all, this is the system that will be used day in and day out for everyone.
